

Beniamino Marini

Senior product designer

Building the infrastructure design teams actually ship from. I work end-to-end: from system strategy to production code, side by side with engineering. Based in Berlin.

SKILLS

Design systems
Rapid prototyping
Token architecture
Figma · Figma MCP
Figma Plugin API
Storybook
React · TypeScript
HTML · CSS · JS
AI tooling
Accessibility (A11y)
Design ops
Systems thinking
Data-informed decisions

EDUCATION

B.S. in Psychology
+ studies in computer
science, neuroscience,
and design

EXPERIENCE

Senior Product Designer / Phrase

3+ YEARS (CURRENTLY) / BERLIN (REMOTE)

- Led design and governance of Syntax, a token-based design system serving 6 products, 20+ cross-functional teams, and 13 designers
- Built a knowledge layer grounding Claude Code in Syntax — letting anyone generate on-brand, production-ready UI through natural language
- Built internal Figma tooling to support design system workflows using the Plugin API
- Drove adoption across a fragmented multi-stack environment (Vue, Rails, Grails) through incremental, pragmatic strategy
- Collaborated directly with engineering on component implementation, QA, and design-to-code handoff
- Remained hands-on in product design — feature work, research, stakeholder communication, and design QA alongside systems leadership

Product Designer / Wonderflow

2 YEARS / AMSTERDAM (REMOTE)

- Co-created and maintained Wanda, Wonderflow's design system: foundations, components, accessibility, and documentation
- Technical owner of the company's JAMstack web touchpoints
- Contributed to enabling 10x client onboarding scale through self-service dashboard tooling

My early background is in web design, web development, and industrial automation.
